Research internship offer:

Title: Analysis of life science business accelerators as new participants in innovation ecosystems

### **Research project**

Business accelerators have recently received increasing attention as important cogs in innovation ecosystem development. However, their exact role in the ecosystem is not yet well known, especially outside the IT sector. The purpose of this study is, therefore, twofold: to determine the position of life science (MedTech, Biotech, etc.) accelerators in the innovation ecosystem of different countries and the attributes of support for companies and to identify key features of the life science accelerators that contribute to the change in innovation ecosystems.

### **Your task**

We have already partially collected the necessary data for writing an article. Additionally, you need:

1. Collect information about life science business accelerators in different countries (mainly outside of Europe),
2. Interview managers and advisors of business accelerators,
3. Analyze the collected information,
4. Analyze information available on the Internet related to life science business accelerators
5. Prepare data for the article.

Duration and start date of the project by agreement.
